

L'elettrodomestico è fornito con gli elementi di giunzione degli sportelli con i pannelli della colonna a incasso (supporti a slitta).

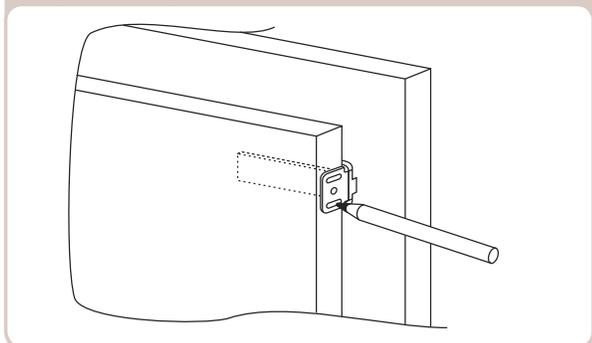

Fissare la slitta nella parte interna del pannello della colonna a incasso all'altezza desiderata e a circa 20 mm dal bordo esterno dello sportello.

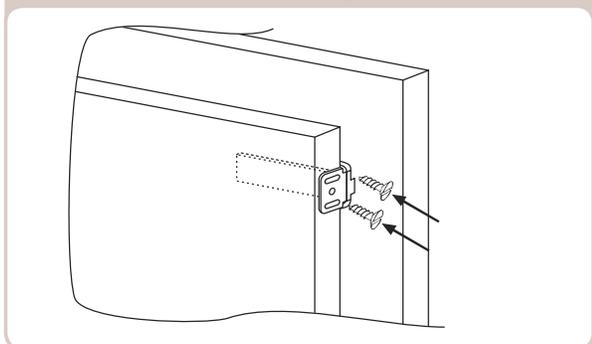

Aprire gli sportelli della colonna a incasso e il frigo. Collocare il supporto nella slitta e applicarlo allo sportello del frigo.

Contrassegnare i punti di fissaggio per le viti e praticare i fori utilizzando un trapano con una punta di 2,5 mm di diametro.

Collegare lo sportello dell'elettrodomestico al pannello del vano utilizzando le scanalature della slitta come guida.

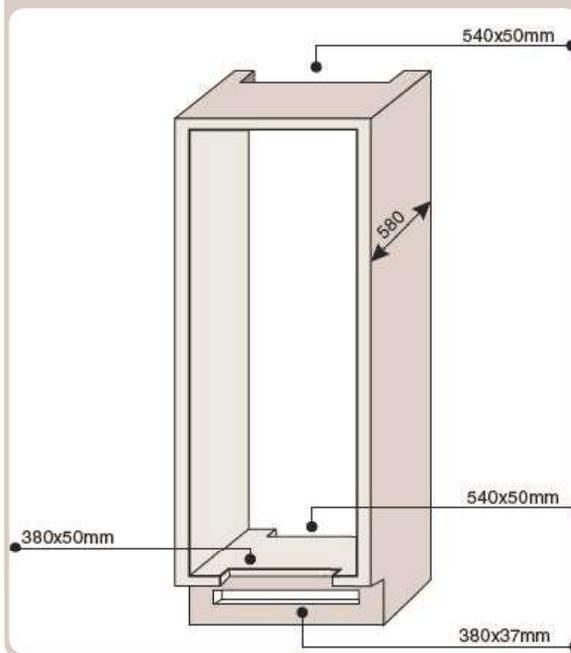

Una volta incassato il prodotto, collocare la parte posteriore della colonna a contatto con la parete in modo da impedire l'accesso al vano compressore.

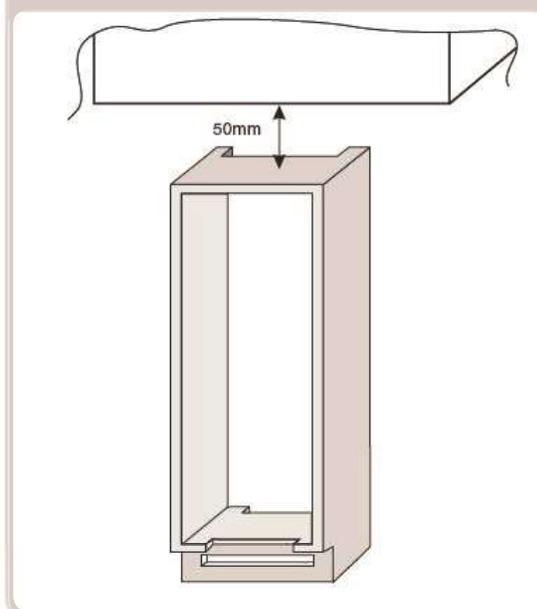

Per il corretto funzionamento del prodotto è necessaria un'adeguata circolazione dell'aria per raffreddare il condensatore collocato sulla parte posteriore dell'elettrodomestico.

A tal fine, la colonna deve essere dotata di camino posteriore la cui apertura deve essere libera e la cui feritoia deve essere coperta da una griglia di ventilazione.

Dimensioni dei ritagli dell'unità.

Spazio da lasciare tra unità e soffitto.

INUTILIZZO TEMPORANEO

Se l'elettrodomestico rimane inutilizzato per molto tempo:

- 1) Spegnerne l'elettrodomestico (vedere Uso).
- 2) Estrarre la spina o rimuovere il dispositivo di sicurezza.
- 3) Pulire l'elettrodomestico.
- 4) Lasciare aperti gli sportelli dell'elettrodomestico.

SOLUZIONE DEI PROBLEMI

PROBLEMA	CAUSA	SOLUZIONE
La lampada per l'illuminazione interna non si accende.	<ul style="list-style-type: none"> Assenza di energia elettrica. L'interruttore degli sportelli è bloccato. 	<ul style="list-style-type: none"> La spina del cavo di alimentazione non è inserita correttamente. Controllare se l'elettrodomestico è spento. (vedere Regolazione della temperatura). Controllare se in casa è mancata la corrente. Controllare se l'elettrodomestico è acceso.
Frigorifero e congelatore non raffreddano sufficientemente.	<ul style="list-style-type: none"> Gli sportelli non sono chiusi. Gli sportelli vengono aperti frequentemente. Impostazione errata della temperatura. Frigorifero e congelatore sono troppo pieni. La temperatura ambiente è troppo bassa. Assenza di energia elettrica. 	<ul style="list-style-type: none"> Accertarsi che lo sportello e le guarnizioni garantiscano una tenuta adeguata. Evitare di lasciare inutilmente gli sportelli aperti per troppo tempo. Controllare l'impostazione della temperatura e diminuirla, se possibile (vedere Regolazione della temperatura). Attendere che la temperatura del frigorifero o del congelatore si stabilizzi. Accertarsi che la temperatura ambiente sia conforme alle specifiche riportate sulla targhetta (vedere Installazione). La spina del cavo di alimentazione non è inserita correttamente. Controllare se l'elettrodomestico è spento (vedere Regolazione della temperatura). Controllare se in casa è mancata la corrente.
Il cibo nel frigorifero si congela.	<ul style="list-style-type: none"> Impostazione errata della temperatura. Alimenti a contatto con la parete posteriore. Il congelamento di una quantità eccessiva di cibo fresco causa l'abbassamento della temperatura del frigorifero. 	<ul style="list-style-type: none"> Controllare l'impostazione della temperatura (vedere Regolazione della temperatura) e diminuirla, se possibile. Staccare gli alimenti dalla parete posteriore del frigorifero. Non superare la quantità massima di alimenti da congelare (vedere Congelamento).
La parte inferiore del comparto frigo è umida o sono presenti goccioline.	<ul style="list-style-type: none"> Il tubo di drenaggio potrebbe essere intasato. 	<ul style="list-style-type: none"> Pulire il tubo di drenaggio con un bastoncino o un oggetto simile per consentire il drenaggio dell'acqua.
Presenza di gocce o acqua sulla parete posteriore del frigorifero.	<ul style="list-style-type: none"> Funzionamento normale del frigorifero. 	<ul style="list-style-type: none"> Non è un difetto (vedere Sbrinamento).
Presenza di acqua nel cassetto della frutta.	<ul style="list-style-type: none"> Circolazione d'aria assente. Frutta e verdura contengono troppa umidità. 	<ul style="list-style-type: none"> Accertarsi che sul ripiano in vetro non siano collocati alimenti che impediscano la circolazione dell'aria. Avvolgere la frutta e la verdura in materiali plastici, ad esempio pellicole, sacchetti o contenitori.
Il motore rimane continuamente in funzione.	<ul style="list-style-type: none"> Gli sportelli non sono chiusi. Gli sportelli vengono aperti frequentemente. La temperatura ambiente è molto alta. Spessore del ghiaccio superiore a 3 mm. 	<ul style="list-style-type: none"> Accertarsi che gli sportelli siano chiusi e che la tenuta delle guarnizioni sia adeguata. Evitare di lasciare inutilmente gli sportelli aperti per troppo tempo. Accertarsi che la temperatura ambiente sia conforme alle specifiche riportate sulla targhetta (vedere Installazione). Impostare il display/termostato su una temperatura più alta. Sbrinare l'unità (vedere Sbrinamento).
Il cibo congelato si scongela.	<ul style="list-style-type: none"> La temperatura ambiente è inferiore alla classe climatica del prodotto. Il compressore si avvia raramente. Lo sportello del congelatore non è chiuso. 	<ul style="list-style-type: none"> Spostare l'unità in un ambiente più caldo o riscaldare l'ambiente. Accertarsi che lo sportello sia chiuso e che la tenuta della guarnizione sia adeguata.
La spia WI-FI lampeggia rimanendo accesa per 3 secondi e spenta per 1 secondo.	<ul style="list-style-type: none"> Router spento. Connessione assente. 	<ul style="list-style-type: none"> Accendere il router. Resettare il prodotto (vedere WI-FI)

SE IL PROBLEMA NON È STATO RISOLTO, RIVOLGERSI AL CENTRO ASSISTENZA INDICANDO IL TIPO DI GUASTO E FORNENDO LE INFORMAZIONI RIPORTATE SULLA TARGHETTA COLLOCATA ALL'INTERNO DEL COMPARTO FRIGORIFERO:

- Modello.
- Numero di serie.

Thank you for purchasing this product.

Before using your refrigerator, please carefully read this instruction manual in order to maximize its performance. Store all documentation for subsequent use or for other owners. This product is intended solely for household use or similar applications such as:

- the kitchen area for personnel in shops, offices and other working environments
- on farms, by clientele of hotels, motels and other environments of a residential type
- at bed and breakfasts (B & B)
- for catering services and similar applications not for retail sale.

This appliance must be used only for purposes of storage of food, any other use is considered dangerous and the manufacturer will not be responsible for any omissions. Also, it is recommended that you take note of the warranty conditions.

SAFET INFORMATION

Scrapping old appliance

By ensuring that this product is properly disposed of, you will help prevent potential negative consequences for the environment and human health, which could otherwise arise due to inappropriate waste handling of this product on reaching the end of its working life. With proper disposal of the appliance, it is possible to recover valuable raw materials!

This appliance is marked as conforming to the European Directive 2012/19/EU on Waste of Electrical and Electronic Equipment (WEEE). The symbol on the product indicates that this appliance may not be treated as normal household waste; it must, instead, be delivered over to the nearest collection point for the recycling of electrical and electronic equipment.

Disposal must be effectuated in accordance with the environmental regulations in force for waste disposal.

For more detailed information about treatment, recovery and recycling of this product, contact the competent public office (Department of Ecology and Environment), your home household waste disposal service, or the shop where you purchased the product.

Cut and dispose of the power cord with the plug.

Up until appropriate disposal, do not damage the tubing because they contain the refrigerant gas.

For the disposal of packing materials, follow local regulations.

WEEE contains both polluting substances (which can cause negative consequences for the environment) and basic components (which can be re-used). It is important to have WEEE subjected to specific treatments, in order to remove and dispose properly all pollutants, and recover and recycle all materials.

Individuals can play an important role in ensuring that WEEE does not become an environmental issue; it is essential to follow some basic rules:

-WEEE should not be treated as household waste.

-WEEE should be handed over to the relevant collection points managed by the municipality or by registered companies. In many countries, for large WEEE, home collection could be present.

- when you buy a new appliance, the old one may be returned to the retailer who has to collect it free of charge on a one-to-one basis, as long as the equipment is of equivalent type and has the same functions as the supplied equipment.

Conformity

CE This equipment, in the parts intended to come into contact with food products, is in conformity with the requirements of EC Regulation No. CE 1935/2004. Apparatus conforms with European Directive 2004/108/EC, 2006/95/EC and successive amendments.

INSTALLATION

WARNINGS:

- Do not install the appliance in a damp or wet location as this could compromise the insulation and result in leakage. Furthermore, on the exterior of the same, condensate could accumulate
- Do not place the appliance in locations outside or near sources of heat or exposed to direct sunlight.

The appliance operates properly within the range of environmental temperatures indicated:

+10 +32°C for the climatic class SN

+16 +32°C for the climatic class N

+16 +38°C for the climatic class ST

+16 +43°C for the climatic class T

(See the nameplate of the product)

- Do not place containers with liquids on top of the appliance.
- Wait at least 3 hours after final placement before placing the appliance in operation.

Electrical connection

After shipping, place the appliance vertically and wait at least 2 - 3 hours before connecting it to the electrical system. Before inserting the plug into the electrical socket, make sure that:

- The socket is earthed and in compliance with the law.
- The socket can withstand the maximum power load of the appliance, as indicated on the nameplate of the refrigerator.
- The power supply voltage is within the amounts indicated on the nameplate of the refrigerator.
- The cord must not be folded or compressed.
- The cord must be checked regularly and replaced solely by authorized technicians.
- The manufacturer declines any liability whenever these safety measures are not respected.

Appliance start-up

Remove all wrapping/packaging present inside the appliance and clean with water and baking soda or neutral soap.

After the installation, wait 2 - 3 hours to allow time for the refrigerator/freezer to stabilize at normal working temperature, before placing fresh or frozen foods inside.

If the power cord becomes disconnected, wait at least five minutes before restarting the refrigerator/ freezer. At this point, the appliance is ready for use.

OPERATION

Turning On/Off (no display)

- The thermostat unit for control of the appliance is located inside of the refrigerator compartment (Fig. 1). Rotate the thermostat knob of the thermostat beyond the "0" position. The light is on when the refrigerator door is open. Turning the knob to "0" completely turns off the product.

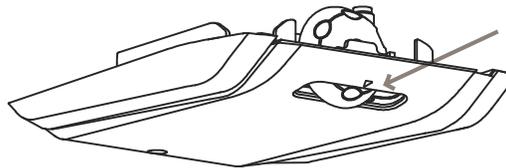

Fig. 1

Temperature adjustment (no display)

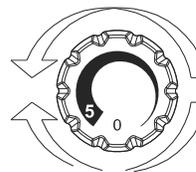

Fig. 2

- The temperature adjustment of both compartments is effected by rotating the thermostat knob (Fig. 2). Select the desired position:
 - For colder temperature in the refrigerator and in the freezer, by turning towards 5.
 - For temperature less cold in the refrigerator and in the freezer, by rotating in the direction of 0.

Refrigerator Compartment Fan (if present)

The fan is preset to OFF.

To activate, press the switch (Fig. 3).

To optimize energy consumption, it is recommended that you turn the fan on only when the ambient air temperature exceeds 28 to 30°C.

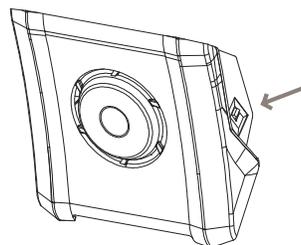

Fig. 3

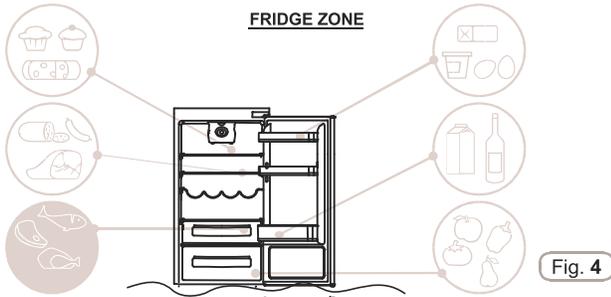

CONSERVATION

• To maintain the best flavour, nourishment and freshness of foods, it is advisable to store them in the refrigerator compartment as shown in Fig. 6 below, making sure to wrap them in aluminium or plastic sheets or in appropriate covered containers to avoid cross-contamination.

Refrigerator zone

Fruit / Vegetables

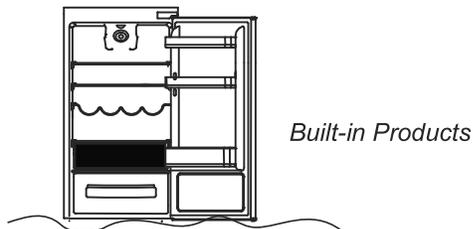

• To decrease fruit and vegetable moisture losses they must be wrapped in plastic materials such as, for example, films or bags and then inserted in the fruit/vegetable zone. In this way rapid deterioration is avoided.

Refrigerated section fresh zone

(not all models)

The zone shown below is recommended for meat, fish, poultry, etc.; do not store fruit and vegetables because they can freeze;

Indicator of the temperature in the coldest zone

(not all models)

Some models are equipped with an indicator of the temperature in the refrigerator compartment in the coldest zone, for you to be able to control the average temperature.

This symbol indicates the coldest zone of the refrigerator (Fig. 5).

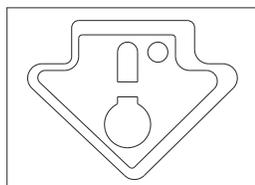

Fig. 5

Check that on the indicator of the temperature, the word OK is clearly shown (Fig. 6). If the word does not appear, this means that the temperature is too high: adjust the temperature to a cooler setting and wait for about 10 hours.

Recheck the indicator: if necessary, proceed with a new adjustment.

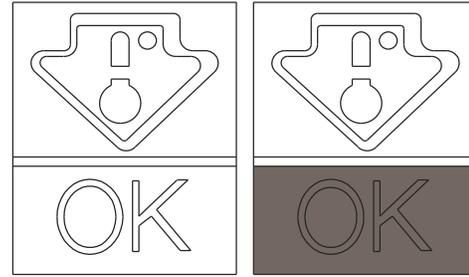

Fig. 6

NOTE:

If large quantities of food are inserted or the refrigerator door frequently opened, it is normal for the indicator fails to show OK. Wait at least 10 h before adjusting the knob to a higher setting.

Freezer zone

Use the table below for the compartments * ** **

Freezing process can only occur in the compartments * ** **

2 - 3 MONTHS			
4 - 6 MONTHS			
6 - 8 MONTHS			
10 - 12 MONTHS			

Practical recommendations

Place food on the shelves in a homogeneous manner to allow air to circulate properly and to cool it.

- Avoid contact between the food and the far end walls of the refrigerator compartment.
- Do not introduce hot foods as they can cause deterioration of existing ones and increase energy consumption.
- Remove the wrappings of foods before inserting them.
- Do not put in dishes or other containers unless previously washed.
- Do not obstruct the cold air ventilator openings with food.
- Do not cover the glass shelf of the vegetable bin to allow for proper air circulation.
- Do not store bottles in the freezer compartment as they can burst when frozen.
- In the case of prolonged power outage, keep the doors closed so that foods remain cold as long as possible.
- The installation of the appliance in a hot and humid location, with frequent door openings and storing large amounts of vegetables can cause the formation of condensate and affect the performance of the unit itself.
- To prevent excessive energy consumption, the frequent or prolonged opening of the doors is not recommended.

FREEZING

- Foods must be fresh.
- Freeze small amounts of food at a time in order to freeze quickly. Never exceed the maximum amount indicated on the rating label.
- During freezing, do not open the freezer door.
- Food must be sealed, airtight.
- Separate food to be frozen by those already frozen.
- Label bags or containers to keep an inventory of frozen foods.
- Once defrosted, do not ever refreeze foods and consume them promptly.

NOTE:

•PRODUCTS WITHOUT DISPLAY

Normally it is not necessary to intervene with the thermostat knob. Only in case you find excessive cooling of the products contained in the refrigerator compartment, gently turning the thermostat knob toward 0 is recommended (Fig. 7).
On completion of freezing, return the knob to the usual position.

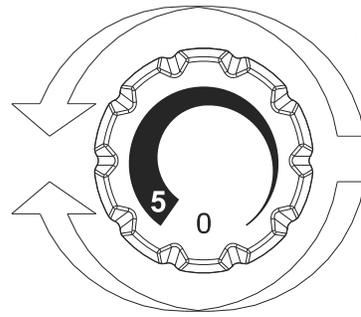

Fig. 7

DEFROSTING

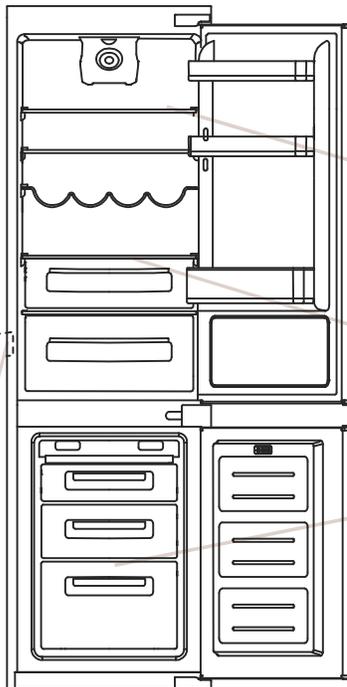

Defrosting the refrigerator compartment

During normal functioning, the refrigerator is automatically defrosted. There is no need to dry the drops of water present on the rear wall or to eliminate the frost (depending on functioning). The water is conveyed to the rear part through the drain hole found there and the heat of the compressor causes it to evaporate.

- Keep the drainage pipe (Fig. 8) clean in the refrigerator compartment to keep it free of water.

The rating plate states the maximum quantity of foods that can be frozen, (see Figure 8).

(Figure 8)

Defrosting of the fridge compartment occurs automatically in this product.

A small amount of frost or drops of water on the back of the fridge compartment when the fridge is working is normal.

Make sure the water outlet is always clean and make sure foods do not touch the back or sides of the freezer compartment.

We recommend you defrost the freezer area when the layer of frost is more than 3 mm thick.

N.B. Here you will find your appliance rating plate: it includes all the data to be transmitted to the Customer Service should a fault arise.

Important: if your ambient temperature is high, the appliance may operate continuously, thus building up excessive frost on the inner wall of the fridge. In this case, turn the fridge knob to a warmer setting (1-2).

Fig. 8

Defrosting the freezer compartment

(static products without NO-FROST technology)

When the layer of frost present in the freezer compartment exceeds 3mm, it is recommended to proceed with the defrosting as it increases energy consumption.

1) Rotate the knob to the „0“ position (Fig .9)

Fig. 9

- 2) Disconnect the power cord.
- 3) Remove the frozen food and temporarily place them in a cool place.
- 4) Leave the freezer door open to speed defrosting.
- 5) Collect the water on the bottom of the product.
- 6) Dry the freezer.
- 7) Reconnect the power cord and set the desired values.
- 8) Wait a moment and reintroduce the frozen foods.

WARNING:

Absolutely avoid the use of open flames or electrical appliances, such as heaters, steam cleaners, candles, oil lamps and the like to accelerate the defrosting phase.

Do not scrape with a knife or sharp object to remove frost or ice present. These can damage the refrigerant circuit, the leakage of which can cause a fire or damage your eyes.

Defrosting the freezer compartment

(NO-FROST products)

Defrosting is automatic.

MAINTENANCE AND CLEANING

Lighting

LED lighting

The product is equipped with LED lights, please contact the Technical Assistance Service in case of replacement.

Compared to traditional light bulbs, the LEDs last longer and are environmentally friendly.

Cleaning

NOTICE:

- Before each operation, remove the refrigerator plug from the power socket to prevent electric shocks.
- Do not pour water directly on the outside or inside of the refrigerator itself. This could lead to oxidation and damaging of the electrical insulation.

IMPORTANT:

To prevent cracking of the inside surfaces and plastic parts, follow these suggestions:

- Wipe away any food oils adhered to plastic components.
- The internal parts, gaskets and external parts can be cleaned with a cloth with warm water and baking soda or a neutral soap. Do not use solvents, ammonia, bleach or abrasives.
- Remove the accessories, for example, the shelves, from the refrigerator and from the door. Wash in hot soapy water. Rinse and thoroughly dry.
- The back of the appliance tends to accumulate dust which can be eliminated with the use of a vacuum cleaner, after having switched off and disconnected the appliance from the electrical outlet. This provides greater energy efficiency.

ENERGY SAVINGS

For better energy savings, we suggest:

- Installing the appliance away from heat sources and not exposed to direct sunlight and in a well ventilated room.
- Avoid putting hot food into the refrigerator to avoid increasing the internal temperature and therefore causing continuous functioning of the compressor.
- Do not excessively stuff foods so as to ensure proper air circulation.
- Defrost the appliance in case there is ice (see DEFROSTING) to facilitate the transfer of cold.
- In case of absence of electrical energy, it is advisable to keep the refrigerator door closed.
- Open or keep the doors of the appliance open as little as possible
- Avoid adjusting the thermostat to temperatures too cold.
- Remove dust present on the rear of the appliance (see CLEANING).

AVOIDING NOISES

During its operation, the refrigerator emits some absolutely normal noises, such as:

- **HUMMING**, the compressor is running.
- **RUMBLINGS, RUSTLINGS** and **HISSING**, the refrigerant is flowing through the tubes.
- **TICKS** and **CLICKS**, the operation shutdown of the compressor.

Small measures to reduce the vibration noises:

- **Containers touch each other:** Avoid contact between containers and glass recipients.
- **Drawers, shelves, bins vibrate:** Check the proper installation of internal accessories.

NOTE:

The refrigerant gas produces noise even when the compressor is off; it is not a defect, it is normal.

If you hear a clicking sound inside the appliance, it is normal as due to expansion of the various materials.

REVERSIBILITY OF THE DOOR

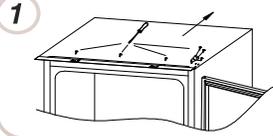

The doors of the appliance can be reversed so as to allow the opening to the right or left according to exigency.

NOTE:

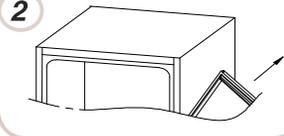

- Inversion of the doors must be performed by qualified technical personnel.
- Inversion of the doors is not covered by the warranty.

REVERSING THE OPENING OF THE DOORS

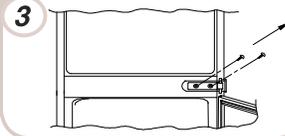

Remove the upper plate and hinge by screw driver.

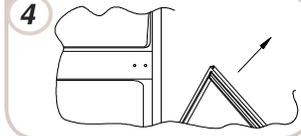

Remove the upper door.

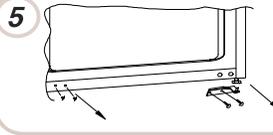

Remove the middle hinge and its connecting pin underneath.

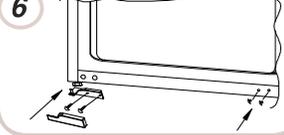

Remove the bottom door.

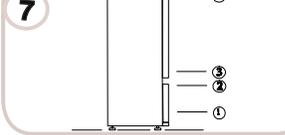

Remove the right bottom hinge and left plastic plugs, and refit them onto the opposite side.

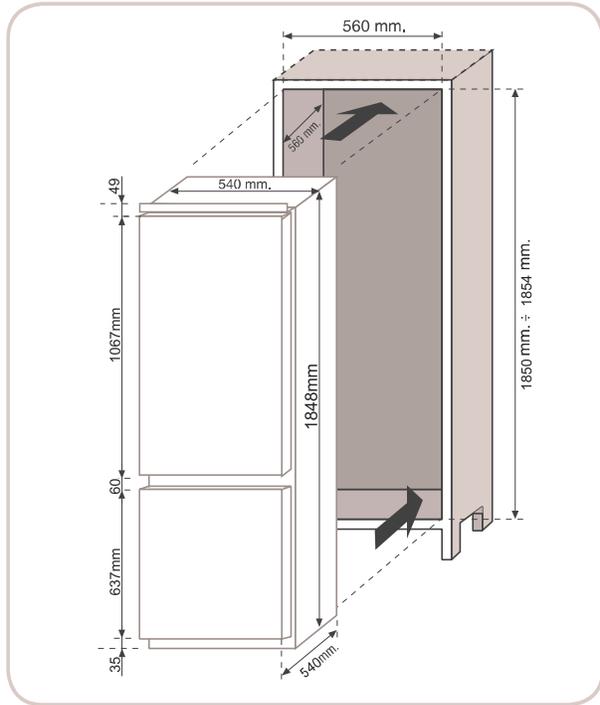

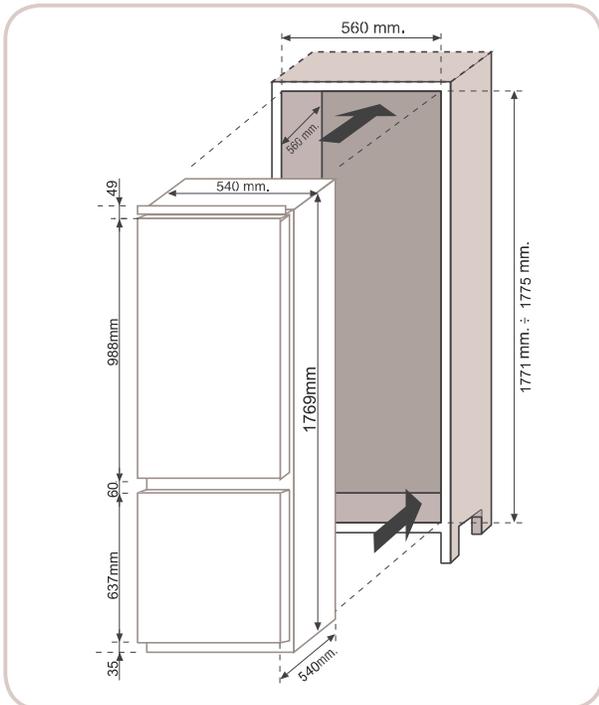

Use the opposite hinge and cover and fit into the left bottom.

Reassemble the doors and hinges workings from bottom to top, from 1-4.

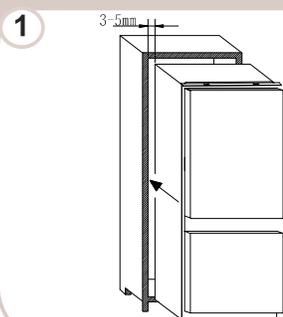

PRODUCT DIMENSIONS AND BUILT-IN COMPARTMENT

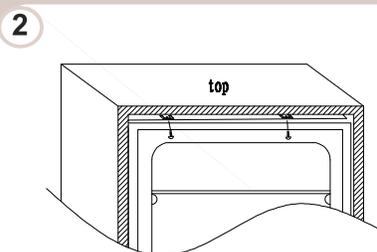

INSTALLATION OF THE APPLIANCE IN THE COLUMN

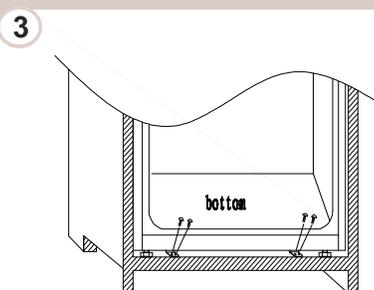

Insert the appliance into the column, placing it on the opposite site of the hinges, and make sure 3-5 mm distance gap.

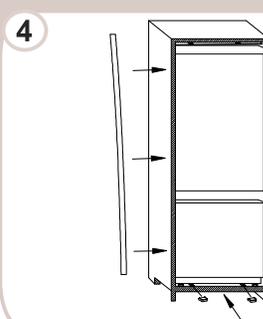

After ensuring the match between appliance door and column door, then screw the appliance upper part to the cabinet

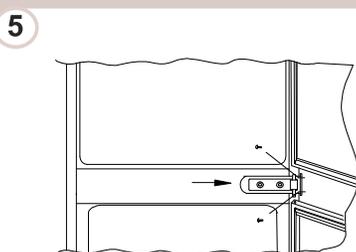

Screw the appliance lower part.

Fit the seal to the appliance, cut off the excessive part if necessary. Fit the bottom parts with plastic covers.

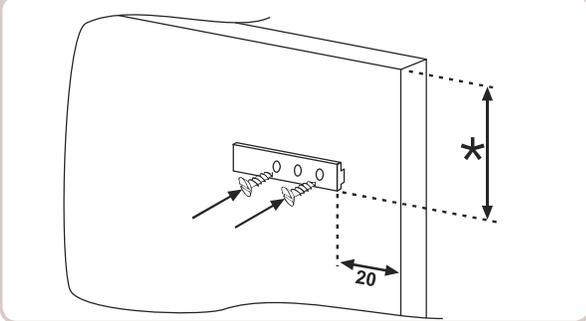

Use a cross-screwdriver to loosen the connecting pin underneath the right middle hinge, and adjust to screw onto the right cabinet wall.

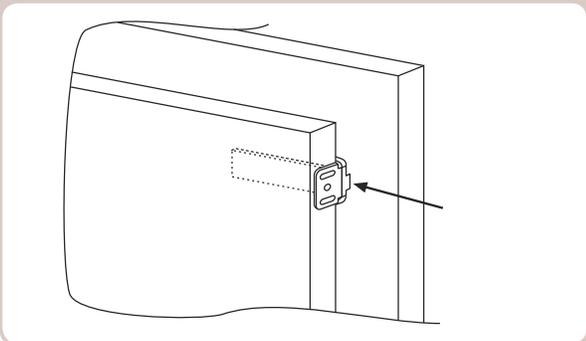

The appliance is equipped with coupling devices for the appliance doors with the column panels (loader slide).

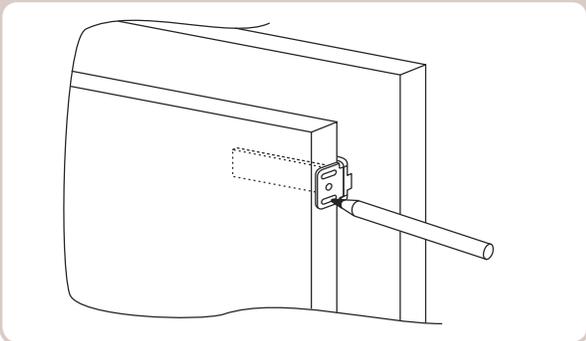

Secure the slide in the inner part of the panel of the built-in column at the desired height and at approx. 20 mm. From the outer wire of the door.

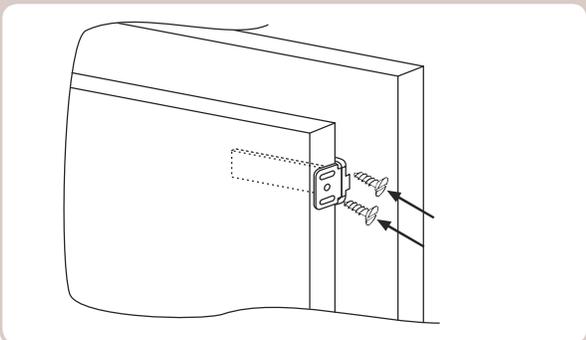

Open the doors of the built-in column and the fridge. Position the built-in loader in the slide, then fit it into the fridge door.

Mark the fixing points for the screws and drill with a bit of a diameter of 2.5mm.

Connect the appliance door to the cabinet panel keeping the loader slots as guidelines.

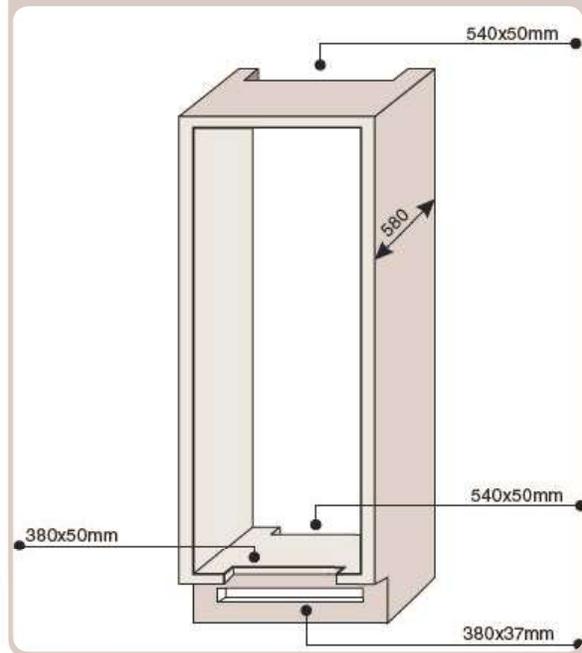

Once the product has been embedded, place the rear part of the column in contact with the wall so as to prevent access to the compressor compartment.

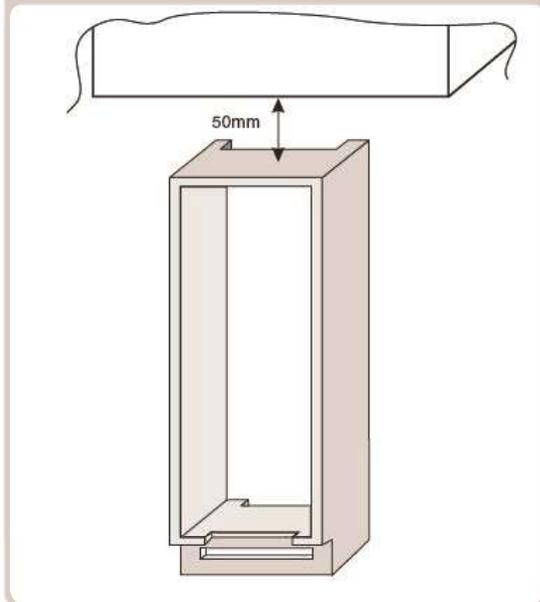

For the product to operate correctly it is essential to allow adequate air circulation so as to cool down the condenser located in the rear part of the appliance.

For this reason, the column must be equipped with a rear chimney, whose upper opening must not be blocked and with a front slot which will be covered with a ventilation grill.

Size of the unit cut outs.

Room to leave between the unit and ceiling.

SUSPENDING USE OF THE APPLIANCE

If the appliance is not to be used for a long time:

- 1) Turn the appliance OFF (see Operation).
- 2) Extract the plug or remove the safety device.
- 3) Clean the appliance
- 4) Leave the doors of the appliance open.

TROUBLESHOOTING

PROBLEM	CAUSE	REMEDY
The inside illumination light bulb does not turn on.	<ul style="list-style-type: none"> • Electricity absence. • Door switch is blocked. 	<ul style="list-style-type: none"> • The power cord is not properly plugged in. • Check whether the appliance is switched off. (see Temperature Adjustment). • Ensure that there is a current in the house. • Check that it is active.
The refrigerator and freezer do not sufficiently cool.	<ul style="list-style-type: none"> • The doors are not closed. • The doors are frequently opened • Erroneous setting of the temperature. • The refrigerator and freezer have been excessively filled. • Surrounding temperature is too low. • No electrical power. 	<ul style="list-style-type: none"> • Check that the door and gaskets close properly. • Avoid unnecessary opening of the doors for a period of time. • Check the temperature setting and, if it is possible, cool even more (see Temperature adjustment) • Wait for the stabilization of the temperature of the refrigerator or freezer. • Check that the ambient temperature is in accordance with what is indicated on the nameplate (see Installation). • The power cord is not properly plugged in. • Check whether the appliance is switched off (see Temperature adjustment) • Ensure that in the home there is current.
The food in the refrigerator freezes.	<ul style="list-style-type: none"> • Erroneous setting of the temperature. • Food in contact with the back wall. • The freezing of too much fresh food causes a lowering of the temperature of the refrigerator 	<ul style="list-style-type: none"> • Check the temperature setting (see Temperature Adjustment) and, if possible, decrease temperature setting. • Separate the food from the back wall of the refrigerator. • Do not exceed the maximum amount to be frozen (see Freezing).
The bottom of the refrigerator compartment is wet or droplets are present.	<ul style="list-style-type: none"> • The drain tube could be clogged. 	<ul style="list-style-type: none"> • Clean the drain tube with a stick or the like to allow the discharge of water.
Presence of drops or water on the back wall of the refrigerator.	<ul style="list-style-type: none"> • Normal operation of the refrigerator. 	<ul style="list-style-type: none"> • It is not a defect (see Defrosting).
Presence of water in the vegetable drawer.	<ul style="list-style-type: none"> • Lack of air circulation. • Vegetables and fruits with too much moisture. 	<ul style="list-style-type: none"> • Verify that your glass shelf tray vegetables are not put foods that prevent air circulation. • Wrap the fruit and vegetable materials plastic such as, for example, films, bags or containers.
The motor runs continuously.	<ul style="list-style-type: none"> • The doors are not closed. • The doors are opened frequently. • Ambient temperature is very high. • Thickness of frost than 3mm. 	<ul style="list-style-type: none"> • Make sure the doors are closed and if the seals close properly. • Avoid unnecessary open ports for a certain period. • Verify that the ambient temperature is in accordance with the specifications on the nameplate (see Installation). • Set the display/thermostat a warmer temperature. • Defrost the unit (see Defrosting).
The frozen food is thawing.	<ul style="list-style-type: none"> • The ambient temperature range below climate class of the product. The compressor starts rarely • The freezer door is not closed. 	<ul style="list-style-type: none"> • Move the unit to a warmer or heat the room. • Make sure the door is closed and that the gasket is sealing properly.
WI-FI light flashes 3 sec on - 1 sec off.	<ul style="list-style-type: none"> • Router off. • Lacking connection. 	<ul style="list-style-type: none"> • Switch the router on. • Reset the product (see WI-FI)

IF YOU ARE NOT SOLVED THE PROBLEM, CONTACT THE SERVICE CENTER, PLEASE GIVE THE TYPE OF FAULT AND THE INFORMATION ON THE PLATE OF THIS APPARATUS TO INSIDE THE REFRIGERATOR COMPARTMENT:

Merci d'avoir acheté ce produit.

Avant d'utiliser votre réfrigérateur, veuillez lire attentivement ce mode d'emploi afin d'optimiser sa performance. Conserver l'ensemble de la documentation pour un usage ultérieur ou pour d'autres propriétaires. Ce produit est conçu uniquement pour une utilisation privée ou des applications similaires comme :

- le coin cuisine du personnel dans les magasins, bureaux et autres environnements de travail
- dans les fermes, par la clientèle des hôtels, des motels et autres environnements résidentiels
- dans les Bed and Breakfast (B & B)
- pour les services de restauration et applications similaires non dédiées à la vente au détail.

Cet appareil doit être utilisé uniquement à des fins de conservation d'aliments, toute autre utilisation est considérée comme dangereuse et le fabricant ne sera pas responsable de toute omission. De plus, il est recommandé de prendre note des conditions de garantie.

INFORMATIONS SUR LA SECURITE

Mise au rebut d'un appareil usagé

En vous assurant de la mise au rebut conforme de ce produit, vous contribuerez à prévenir toute conséquence négative potentielle pour l'environnement et la santé humaine, qui pourrait être provoquée par une gestion inappropriée des déchets, une fois que ce produit aura atteint la fin de sa durée de vie.

Une mise au rebut appropriée de l'appareil peut permettre la revalorisation de précieuses matières premières !

Cet appareil est marqué comme conforme à la Directive Européenne 2012/19/CE relative aux déchets d'équipements électriques et électroniques (DEEE).

Le symbole sur le produit indique que cet appareil ne doit pas être traité comme un déchet ménager normal ; il doit plutôt être déposé au point de collecte le plus proche dédié au recyclage des équipements électriques et électroniques.

Il convient de procéder à la mise au rebut conformément aux réglementations environnementales en vigueur pour la mise au rebut de déchets.

Pour des informations plus détaillées concernant le traitement, la récupération et le recyclage de ce produit, contactez le bureau public compétent (Ministère de l'Ecologie et de l'Environnement), votre service de mise au rebut des déchets ménagers ou le magasin où vous avez acheté le produit.

Coupez et éliminez le cordon d'alimentation avec la fiche.

Jusqu'à la mise au rebut appropriée, n'endommagez pas les tuyauteries étant donné qu'elles contiennent le gaz réfrigérant.

Concernant la mise au rebut des matériaux d'étanchéité, suivez les réglementations locales.

Les DEEE contiennent à la fois des substances polluantes (qui peuvent avoir des conséquences négatives sur l'environnement) et des composants de base (qui peuvent être ré-utilisés). Il est important que les DEEE soient soumis à des traitements spécifiques afin de retirer et d'éliminer tous les polluants de manière appropriée et de valoriser et recycler tous les matériaux.

Chaque personne individuelle peut jouer un rôle important en s'assurant que les DEEE ne deviennent pas un problème environnemental ; il est essentiel de suivre certaines lois fondamentales :

- les DEEE ne doivent pas être traitées comme des déchets ménagers.
- les DEEE doivent être remis aux points de collecte appropriés, gérés par les municipalités ou des entreprises agréées. Dans de nombreux pays, en cas de DEEE de grande taille, la collecte à domicile peut être à disposition.
- lorsque vous achetez un nouvel appareil, l'ancien peut être retourné au vendeur qui doit le collecter gratuitement sous forme d'échange, dans la mesure où l'équipement est d'un type équivalent et qu'il possède les mêmes fonctions que l'équipement fourni.

Conformité

CE Cet équipement, dont certaines pièces sont conçues pour entrer en contact avec des produits alimentaires, est conforme aux exigences du règlement CE n° 1935/2004. L'appareil est conforme à la Directive Européenne 2004/1 08/CE, 2006/95CE et les amendements successifs.

INSTALLATION

AVERTISSEMENTS :

- Ne pas installer l'appareil dans un endroit humide ou mouillé car cela pourrait compromettre l'isolation et provoquer une fuite
- Par ailleurs, sur l'extérieur, de la condensation pourrait s'accumuler.
- Ne pas placer l'appareil à l'extérieur ou à proximité de sources de chaleur ou sous la lumière directe du soleil.

L'appareil fonctionne correctement dans la plage des températures environnementales indiquées :

+10 +32°C pour la classe climatique SN

+16 +32°C pour la classe climatique N

+16 +38°C pour la classe climatique ST

+16 +43°C pour la classe climatique T

(Voir la plaque signalétique du produit)

• Ne pas placer de récipients contenant des liquides sur le dessus de l'appareil.

• Attendre au moins 3 heures après la mise en place finale avant de mettre l'appareil en fonctionnement.

Connexion électrique

Après le transport, placer l'appareil verticalement et attendre au moins 2 - 3 heures avant de le raccorder au système électrique. Avant d'insérer la fiche dans la prise électrique, s'assurer que :

- La prise est reliée à la terre et est conforme à la loi.
- La prise peut supporter la charge électrique maximale de l'appareil, comme indiqué sur la plaque signalétique du réfrigérateur.
- La tension d'alimentation se trouve dans les plages indiquées sur la plaque signalétique du réfrigérateur.
- Le cordon ne doit pas être plié ou comprimé.
- Le cordon doit être vérifié régulièrement et remplacé uniquement par des techniciens autorisés.
- Le fabricant décline toute responsabilité en cas de non-respect de ces mesures de sécurité.

Démarrage de l'appareil

Retirer tous les matériaux de conditionnement/d'emballage présents à l'intérieur de l'appareil et le nettoyer avec de l'eau et du bicarbonate de soude ou du savon neutre.

Après installation, attendre 2 - 3 heures pour laisser le temps au réfrigérateur/congélateur de se stabiliser à la température de service normale, avant de déposer des aliments frais ou surgelés à l'intérieur.

Si le cordon d'alimentation est débranché, attendre au moins cinq minutes avant de redémarrer le réfrigérateur/congélateur. A partir de ce point, l'appareil est prêt à être utilisé.

FUNCTIONNEMENT

Allumer/Éteindre (Pas d'affichage)

• L'unité du thermostat pour la commande de l'appareil est localisée à l'intérieur du compartiment du réfrigérateur (Fig. 1).

Faire tourner le bouton du thermostat au-delà de la position « 0 ».

La lumière s'allume lorsque la porte du réfrigérateur est ouverte. Pour éteindre complètement le produit, tourner le bouton sur « 0 ».

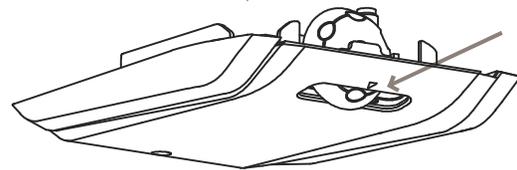

Fig. 1

Réglage de la température (Pas d'affichage)

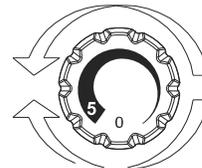

Fig. 2

• Le réglage de la température des deux compartiments est effectué en tournant le bouton du thermostat (Fig. 2).

Sélectionner la position souhaitée :

• Pour obtenir une température plus froide dans le réfrigérateur ou le congélateur, tourner vers 5.

• Pour obtenir une température moins basse dans le réfrigérateur ou le congélateur, tourner en direction de 0.

(si présent)

Le ventilateur est pré-réglé sur OFF.

Pour l'activer, appuyer sur l'interrupteur (Fig. 3).

Pour optimiser la consommation énergétique, il est recommandé que vous activiez le ventilateur uniquement lorsque la température ambiante de l'air dépasse 28 à 30°C.
